**DETAILED ACTION**

***Election/Restrictions***

1. This application contains claim 18 drawn to an invention nonelected with traverse in communication filed on 10/16/03. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Claims 1-7, 9-17, and 19-20 are currently under consideration in this application.

***Claim Rejections - 35 USC § 102/103***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the

Art Unit: 1713

reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 1-7, 15-16, and 19-20 are rejected under 35 U.S.C. 102(e), (b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Patel et al (US-839) or EP 0630 909 or EP 0296 331 for the reasons of record and further in view of the following remarks.

5. Claims 9-14, and 17 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over EP 0630 909 for the reasons of record and further in view of the following remarks.

Applicant's remarks detailed in papers filed on 10/14/04 have been fully considered but are not found to be persuasive for at least the following reasons. Applicant's main argument lies in the difference in process step.

Art Unit: 1713

However, applicant has not provided clear and convincing factual evidence that the respective compositions do in fact differ in kind, not have applicant come forward with evidence establishing unobvious differences between the claimed product and the prior art product. The instant product-by-process claims rejected under 35 USC 102/103 are, therefore, proper and is maintained.

The process claims 9-14, and 17 are further rejected over EP-909 for the reasons set forth in communication mailed on 7/14/04. EP-909 teaches the incremental addition of monomers (post-initiation monomer feed) during a continuous free radical polymerization process in the production of water-soluble polymer. The reference defined incremental in terms of adding increments at consistent rate over a time period during polymerization (page 7, lines 34-36; page 13, lines 47-49). In other words, incremental means adding monomer in increments with some time interval between additions. The examiner is of the position that the time intervals are routinely uniform in nature and, if the reference does not specifically teach that they be done otherwise. Accordingly, this type of incremental addition would be at least prima facie obvious to one of ordinary skill in the art. The uniformly spaced

addition of monomer would necessarily result in an oscillation of monomer content and would, therefore, meet both the claimed process and the product therefrom. Thus, the examiner's position is maintained.

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Helen L. Pezzuto whose telephone number is (571) 272-1108. The examiner can normally be reached on 8 AM to 4 PM, Monday thru Friday.
